Our Recent Projects and Customers

- 1. GE Power Systems, Atlanta, GA: GE Power Systems** is a world wide organization that needed a project management system to deliver relevant information on a real time basis to their stakeholders. We are working with GE to implement project management system that is designed to deliver strategic information over the world wide web to give managers the competitive advantage they need to deliver projects on-time, within budget and with no surprises.
- 2. Duke Energy/Cinergy Corp, Plainfield, IN**
Designed, built and implemented project management system to enable project managers to analyze information regarding their respective projects in a portfolio view. This enables project managers to make informed decisions when they execute their projects. The system not only provides dynamic access to project information during the project execution phase but also helps managers plan projects and store budget data at the on-set of their projects. The managers can access budget versus actual information from any where and anytime. The system is vital to Cinergy's on-time and within budget project delivery to Keep their customers happy.
- 3. Indianapolis Airport Authority, Indianapolis, IN**
Setup document management and workflow system based on Meridian software Prolog Manager and Prolog Website. The solution enables team of Architects, Design Engineers, Consultants, Construction Managers and Builders to participate in collaborative decision making for successful project completion. Built Custom reports for each team for more in-depth analysis of their piece of action.
- 4. IBM, Cincinnati, OH:**
Developed custom software modules in Java to enable IBM clients' to build on-line P3e based project management system. The system enables project managers to build project portfolios and project metrics for successful project delivery.
- 5. TEAM Associates, Tampa, Florida**
Developed a web based secured remote project update tool based on Primavera P3e back-end database. The functionality was first developed in Microsoft ASP technology and then later replaced by Sun Microsystem's Java language. The tool enables project team members to update schedule and cost data in P3e database residing on a central database.
- 6. Indiana State Department of Health, Indianapolis, IN**
Provided training for Microsoft .NET technology for building custom web applications.
- 7. Sarasota Municipal Corporation, Sarasota, Florida**
Provided consulting services in selection of the right Project Management tools to support the municipality's 10 years capital construction program. P3e was selected as program wide project management and project control tool to support planning, Scheduling, budgeting, cost control, progress updates and reporting.
